This publication has been divided into sections headed by two figure numbers which appear in the parts microfiches and in the repair time schedules.

The section titled **INTRODUCTION** and **TECHNICAL DATA (00.)** has a dual purpose of introducing the model and reinforcing the remaining part of the manual.

It contains tables of technical data and information relating to the chapters in the remaining section of the manual.

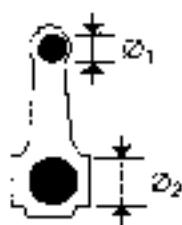

The remaining sections (**10. - 18.** etc) include descriptions of the servicing operations.

**NOTE** *The operations involved in removing-refitting the power unit are illustrated in section 10. The procedure for overhauling the engine at the bench is described in a separate booklet which has its own print number. It should be inserted, according to the size of the engine, in the appropriate section, in either the "Overhauling petrol engines" or "Overhauling Diesel engines" binder.*

This publication contains graphic representations and symbols in place of descriptions for mechanical components, operations and servicing techniques.

The use of colour for a component or part of one serves to draw the operator's attention to the object to be measured or checked.

Example:

Small end diameter

Big end bearing housing

Tighten to torque

**THIS PUBLICATION HAS BEEN PRODUCED IN A LOOSE LEAF FORMAT TO FACILITATE THE OPERATION OF UPDATING THE MODEL.  
ANY SUBJECTS DEALT WITH IN THE SERVICE BULLETINS SHOULD BE INSERTED, FROM TIME TO TIME, UNDER THE APPROPRIATE SECTION.**

The **DELTA HF 4WD** is a 2 box saloon with a load carrying structure; it has a 1995 cc 4 cylinder in line engine transversely mounted at the front which runs on super petrol, has an electronic ignition/injection system, is supercharged by a turbocharger and develops a power output of 122 kW (165 bhp).

It has permanently engaged four wheel drive.

Ferguson type viscous joints are fitted to the central differential. The rear differential is the Torsen self-locking type.

**THE PRISMA 4WD** is a three box saloon with a load carrying structure; it has a 4 cylinder in line 1995 cc engine transversely mounted at the front, runs on super petrol, is equipped with an electronic injection/ignition system and develops a power output of 84.5 kW (115 bhp).

It has permanently engaged four wheel drive.

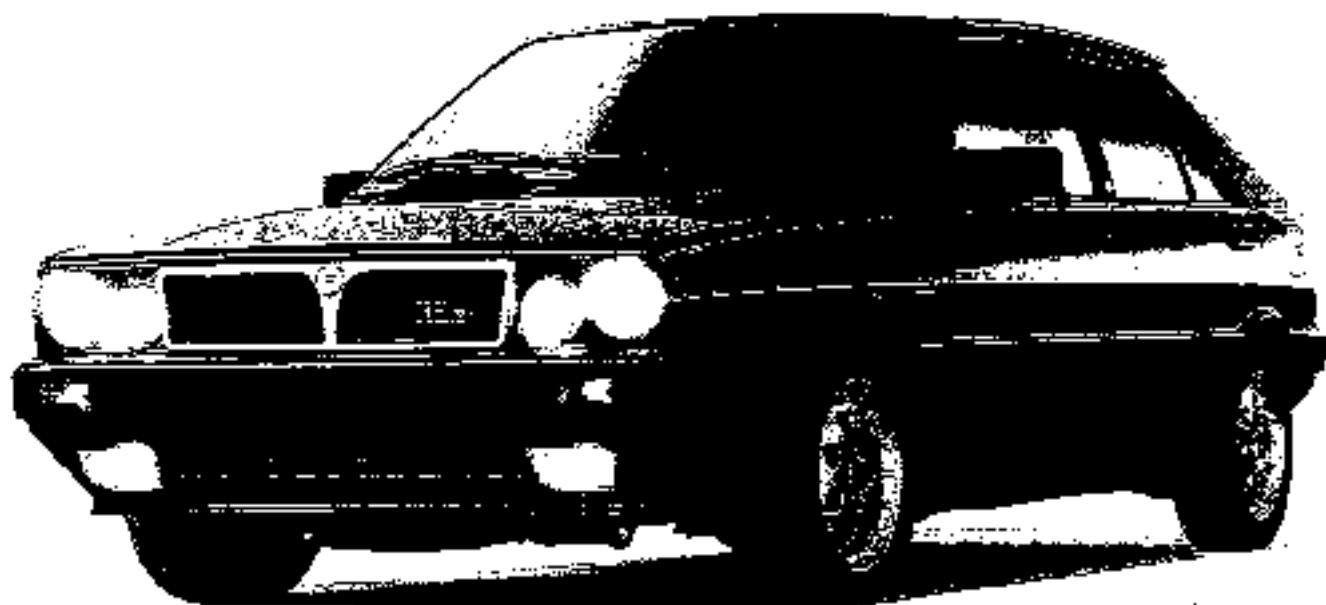

Ferguson type viscous joints are fitted to the central differential. The rear differential has electro-pneumatic engagement for locking.

Spare wheel housing on the DELTA HF 4WD

**NOTE** The spare wheel is smaller; in order to remove it from its housing undo the clip A and remove the cover B. This wheel should only be used for essential journeys to reach a garage where repairs can be carried out. Maximum speed 80 kph (50 mph).

Spare wheel housing on the PRISMA 4WD

Engaging-releasing rear differential for the PRISMA 4WD

In order to lock the rear differential press the lower section of switch D and LED E should come on. To release the differential press the upper section of switch D.

#### Characteristic power curves from EEC method

The power curves shown can be obtained with the engine overhauled and run in without a fan and with a silencer and air filter fitted at sea level.

#### Test bench test cycle with overhauled engine

In the bench test of the overhauled engine it is not advisable to run the engine at maximum speed but to stick to the figures given in the table; complete the running in of the actual engine in the car.

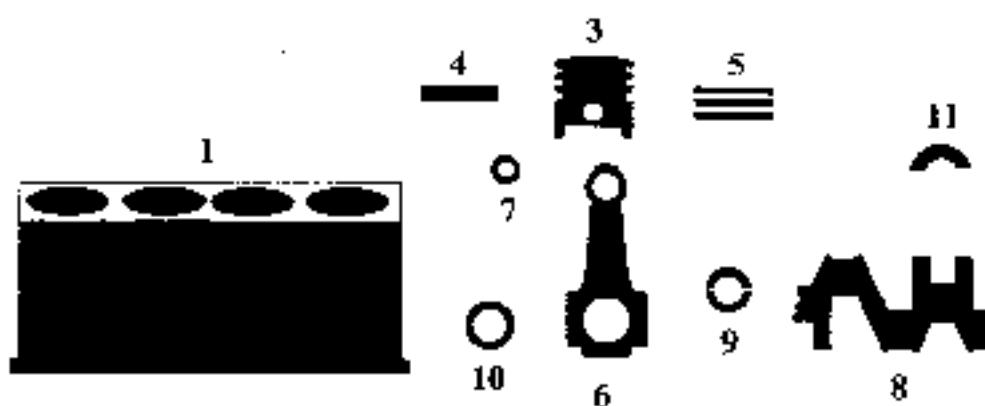

| Test speed (rpm) | Time in minutes | Load on the brakes |
|------------------|-----------------|--------------------|
| 800 - 1000       | 10'             | no load            |
| 1500             | 10'             | no load            |
| 2000             | III'            | no load            |

Diagram showing connecting rod-piston assembly and direction of rotation in engine

A = Area where number of cylinder bore to which connecting rod belongs is stamped.

The arrow shows the direction of rotation of the engine as seen from the timing side.

1mm = Gudgeon pin offset on the piston.

## COOLING SYSTEM

|   |   |            |
|---|---|------------|
| Cooling circuit   | coolant circulation via centrifugal pump, radiator and electric fan operated by thermostatic switch |            |
| Water pump operation  | through belt  |            |
|  Thermostat switch to engage fan |                    | 90° ÷ 94°C |
|   |                    | 85° ÷ 89°C |
| Engine cooling water thermostat   | opens   | 81° ÷ 85°C |
|   | max opening   | 97°C       |
|   | valve travel  | ≥ 7,5 mm   |
| Clearance between impeller blades and pump casing   |                  | 0,8 ÷ 1 mm |
| Pressure for checking water tightness of system   |   | 0,98 bar   |
| Pressure for checking overflow valve on expansion tank  |   | 0,98 bar   |

## FUEL SYSTEM

|          |                |
|----------|----------------|
| Pump     | electric       |
| Capacity | ~ 120 litres/h |

## SUPERCHARGING (with turbocharger operated by exhaust gases with wastegate valve)

|                                |         |            |   |
|--------------------------------|---------|------------|---|
| Turbocharger type              | KKK K26 | Garrett T3 | - |
| Maximum supercharging pressure | 0,9 bar |            | - |

## Checking engine idle speed and carbon monoxide emissions

|                   |     |           |              |
|-------------------|-----|-----------|--------------|
| Engine speed      | rpm | 800 ÷ 910 | (750 ÷ 800)* |
| CO idle emissions | (%) | 1,5 ÷ 0,5 |              |

128. Ignition switch

## CHARACTERISTIC IGNITION ADVANCE CURVES FOR EIGHT VACUUM VALUES IN THE INLET MANIFOLD

at an absolute pressure of 0.18 bar (135 mmHg)

at an absolute pressure of 0.299 bar (225 mmHg)

# DELTA 4WD

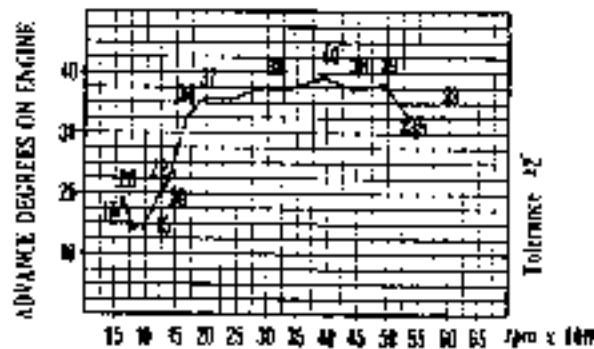

## Technical data

### Electrical equipment: electronic injection/ignition

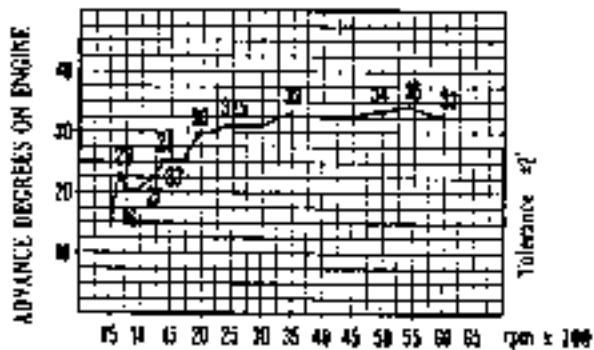

00.55

at an absolute pressure of 0,43 bar (321 mmHg)

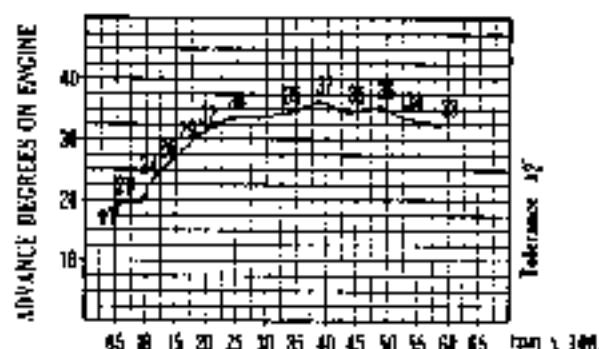

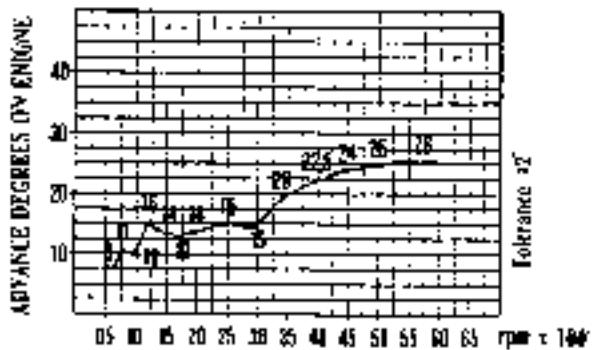

at an absolute pressure of 0,54 bar (405 mmHg)

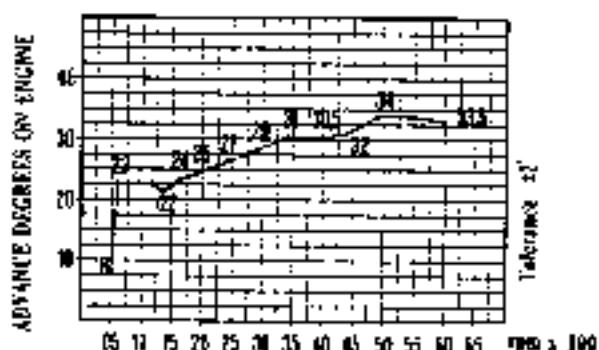

at an absolute pressure of 0,70 bar (525 mmHg)

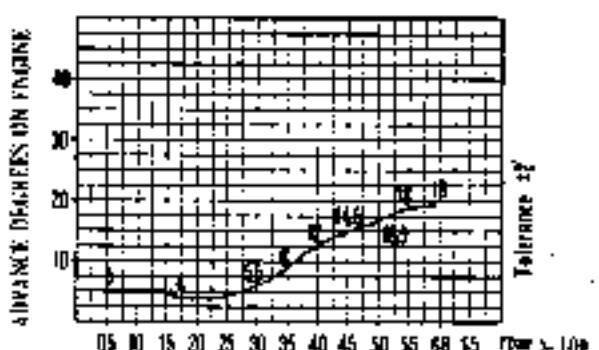

at an absolute pressure of 1,38 bar (1035 mmHg)

at an absolute pressure of 0,92 bar (690 mmHg)

at an absolute pressure of 1,80 bar (1350 mmHg)

# Technical data

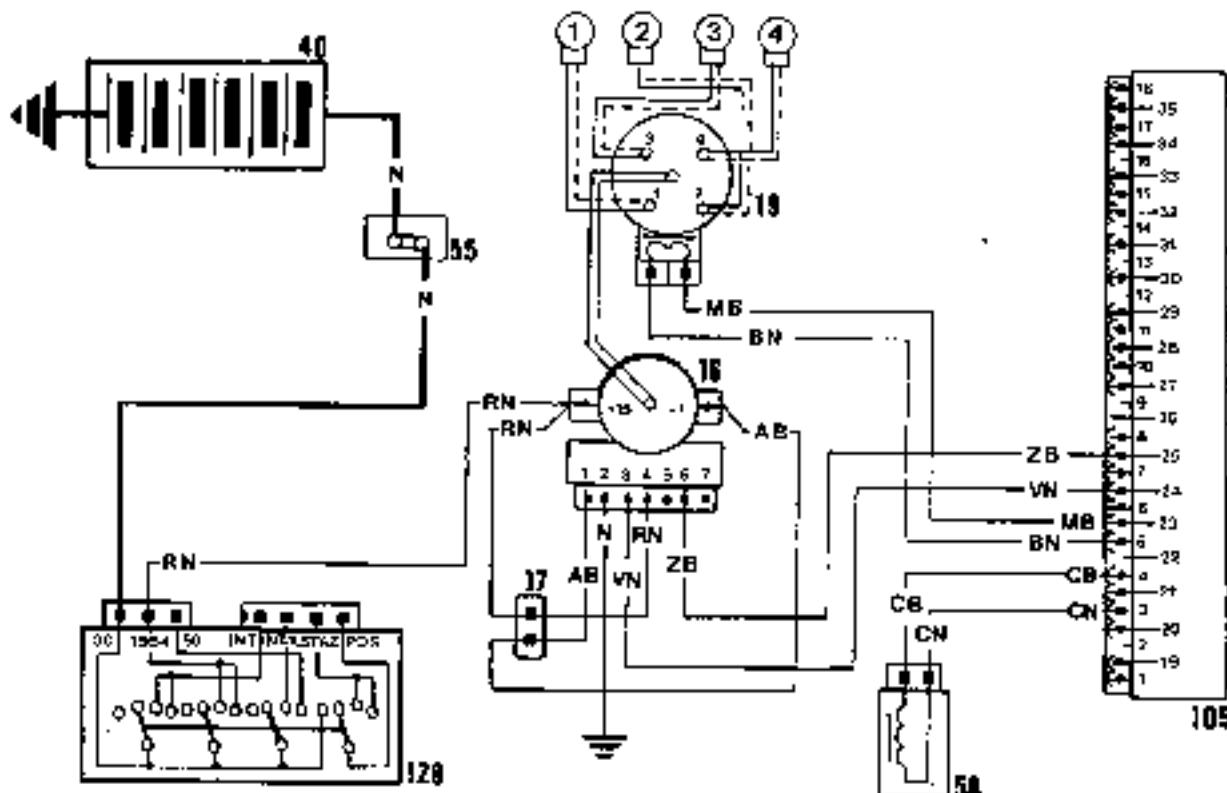

PRISMA 4WD

Electrical equipment: electronic injection/ignition

DIAGRAM SHOWING INJECTION/IGNITION CONTROL UNIT CONNECTIONS (CONCERNING ELECTRONIC IGNITION ONLY)

The identification numbers for the components are the same as those used in the wiring diagrams

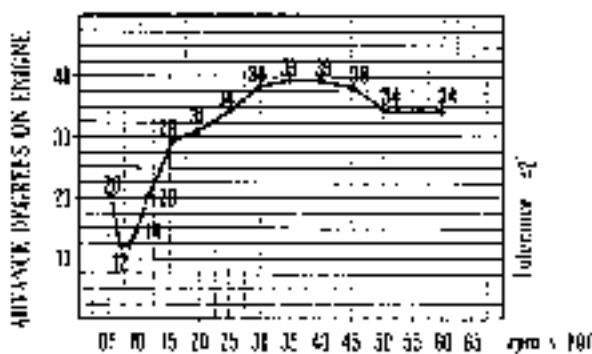

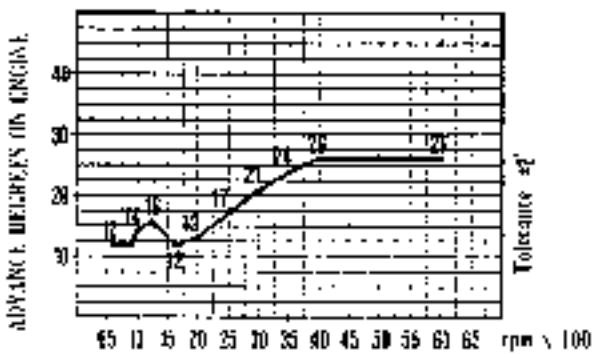

16. Ignition coil with power module  
17. Connection  
19. H.T. distributor with built in timing sensor  
40. Battery

55. Connector  
58. Rpm and TDC sensor  
109. Injection ignition electronic control unit  
128. Ignition switch

CHARACTERISTIC IGNITION ADVANCE CURVES FOR EIGHT VACUUM VALUES IN THE INLET MANIFOLD

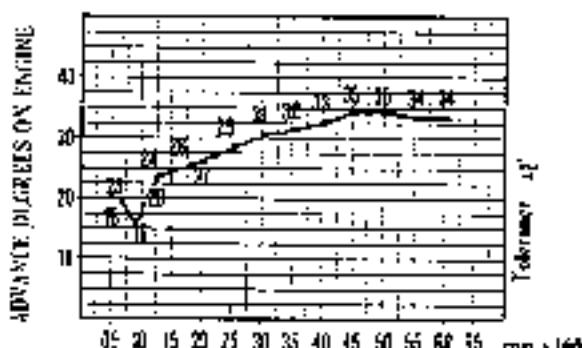

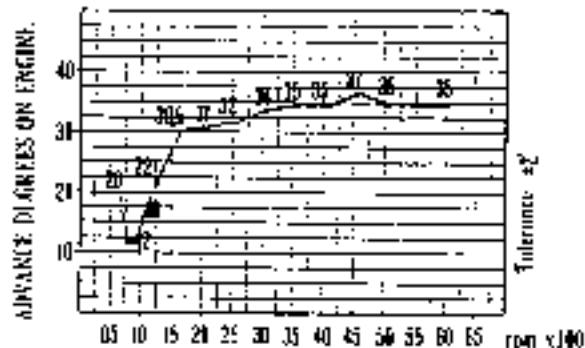

at an absolute pressure of 0,17 bar (129 mmHg)

at an absolute pressure of 0,299 bar (225 mmHg)

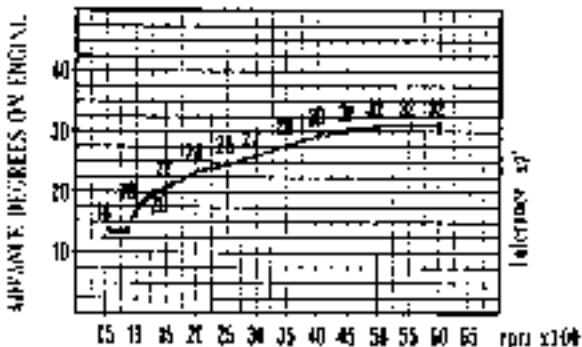

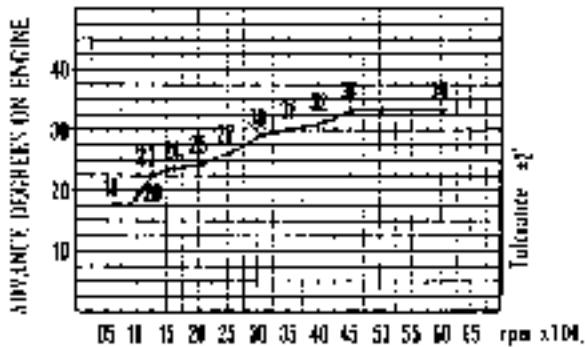

at an absolute pressure of 0,39 bar (294 mmHg)

at an absolute pressure of 0,53 bar (399 mmHg)

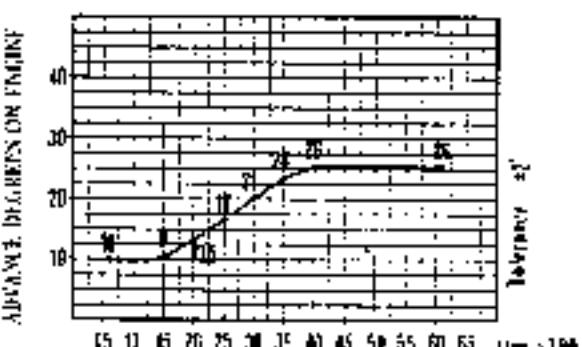

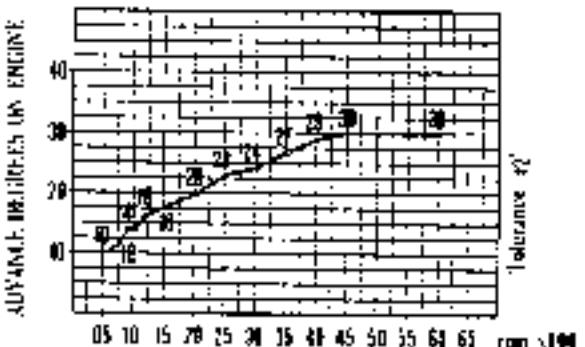

at an absolute pressure of 0,60 bar (450 mmHg)

at an absolute pressure of 0,73 bar (549 mmHg)

at an absolute pressure of 0,82 bar (615 mmHg)

at an absolute pressure of 0,82 bar (619 mmHg)
