### IMPORTANT SAFETY NOTICE

The vehicle is a machine comprising a great number of parts. Basically speaking, the vehicle is potentially hazard. However, one can handle it safely if he has the required knowledge.

Correct service methods and repair procedures are very vital for assuring not only the safety and reliability of a vehicle, but also the safety of service personnel concerned.

The methods and procedures contained in this manual describe in a general way the techniques which the manufacturer has recommended. Thus, they will contribute to ensuring the reliability of the products. The contents of the servicing operations come in a wide variety of ways. Moreover, techniques, tools and parts necessary for each operation are different widely from each other.

This manual does not cover all details of techniques, procedures, parts, tools and handling instructions which are necessary for these operations, for such coverage is impossible. Hence, any one who obtains this manual is expected first to make his responsible selection as to techniques, tools and parts which are necessary for servicing the vehicle concerned properly. Furthermore, he must assume responsibility for his actions in connection with his own safety.

Therefore, one should not perform any service if he is not capable of making responsible selection and/or if he can not understand the contents herein described, for this manual has been prepared for experienced service personnel.

### WARNINGS, CAUTIONS AND NOTES

All these symbols have their specific purposes, respectively.

#### WARNING:

- This symbol means that there is a possibility of personal injury of the operator himself or the nearby workers if the operator fails to follow the operating procedure prescribed in this manual.

#### CAUTION:

- This symbol means that there is a possibility of damage to the component being repaired if the operator fails to follow the operating procedure prescribed in this manual.

#### NOTE:

- To accomplish the operation in an efficient manner, additional instructions concerning the operation are given in this section.

The following list describes general WARNINGS:

- Always wear safety glasses for eye protection.
- Use safety stands whenever a procedure requires you to be under the vehicle.
- Be sure that the ignition switch is always in the OFF position, unless otherwise required by the procedure.
- Set the parking brake when working on the vehicle.
- Operate the engine only in a well-ventilated area to avoid the danger of carbon monoxide.
- Keep yourself and your clothing away moving parts, when the engine is running, especially from the fan and belts.
- To prevent serious burns, avoid contact with hot metal parts such as the radiator, exhaust manifold, tail pipe, catalytic converter and muffler.
- Do not smoke while working on a vehicle.
- To avoid injury, always remove rings, watches, loose hanging jewelry, and loose clothing before beginning to work on a vehicle.
- Keep hands and other objects clear of radiator fan blades! The electric cooling fan is mounted on the radiator and can start to operate at any time by an increase in underhood temperature. The electric cooling fan is also mounted on the condenser for air conditioner and start to operate in anytime during air conditioner switch "ON". For this reason care should be taken to ensure that the electric cooling fan motor is completely disconnected when working under the hood.

**YOU SHOULD OBSERVE THE FOLLOWING WARNING WHEN WORKING ON THE VEHICLE AS LAID DOWN BY THE HEALTH AND SAFETY EXECUTIVE.****THE DANGER**

Some vehicle parts contain asbestos. Working with them can create dust. Breathing this dust is harmful. Cases of asbestos related cancer have been reported in garage workers.

The dangerous jobs are:

- cleaning brake assemblies
- cleaning clutch housings
- grinding brake linings
- drilling brake linings
- sweeping floors

Brake and clutch linings and disc pads may contain asbestos. If in doubt assume that they do.

**WHO IS AT RISK?**

Anyone in the garage could be at risk. There is no known safe level of asbestos dust. But the more dust you breath, the greater the chance of lung damage.

The problem is that the dust particles are too small to be seen by the naked eye. And the diseases caused can take years to develop.

Don't put the brakes on your life. Avoid breathing asbestos dust. Prevent dust getting into the air. Follow the WARNING.

**WARNING**

1. DON'T blow dust out of brake drums or clutch housings with an air line
2. DO use properly designed drum cleaning equipment which prevents dust escaping  
or  
use clean wet rags to clean out drums or housings.  
Put used rags in a plastic waste bag while still wet.
3. DON'T grind or drill linings unless the machine has exhaust ventilation or there is a ventilated booth to do the work in.
4. DON'T use brushes to sweep up dust.
5. DO use a special vacuum cleaner to remove dust
6. DO wet dust thoroughly and scrape it up if you haven't got a vacuum.
7. DO wear the protective clothing, such as overalls, provided by your employer.
8. DON'T take the protective clothing home. It should be cleaned by your employer.
9. DON'T use equipment if it is not maintained and checked. Ask to see the examination reports for ventilation systems.

WRB1-B02

## 9. SUMMARY OF ENGINE CONSTRUCTION

### 9-1. INTERCOOLER TURBOCHARGER (DL-52 Engine)

The turbocharger is equipped with an air-cooled intercooler, thereby increasing the maximum horsepower and torque output.

WRE91-G020

#### P.C.S. (Power Control System)

##### (1) Transmission shift position: 1st gear

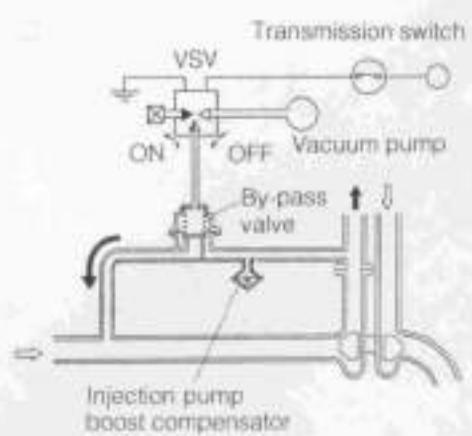

When the pressure of the air pressurized from the turbocharger exceeds 300 mmHg, part of the air is by-passed to the air cleaner side.

##### (2) Transmission shift position: 2nd gear to 5th gear

The by-pass port is closed.

##### NOTE:

- If the supercharging in excess of the specified level is likely to take place, the waste gate valve opens to release the pressure so as to prevent excessively high supercharging.

Shift position	Transmission switch	VSV	By-pass valve
1st	OFF	OFF	Open
Reverse & 2nd - 5th	ON	ON	Close

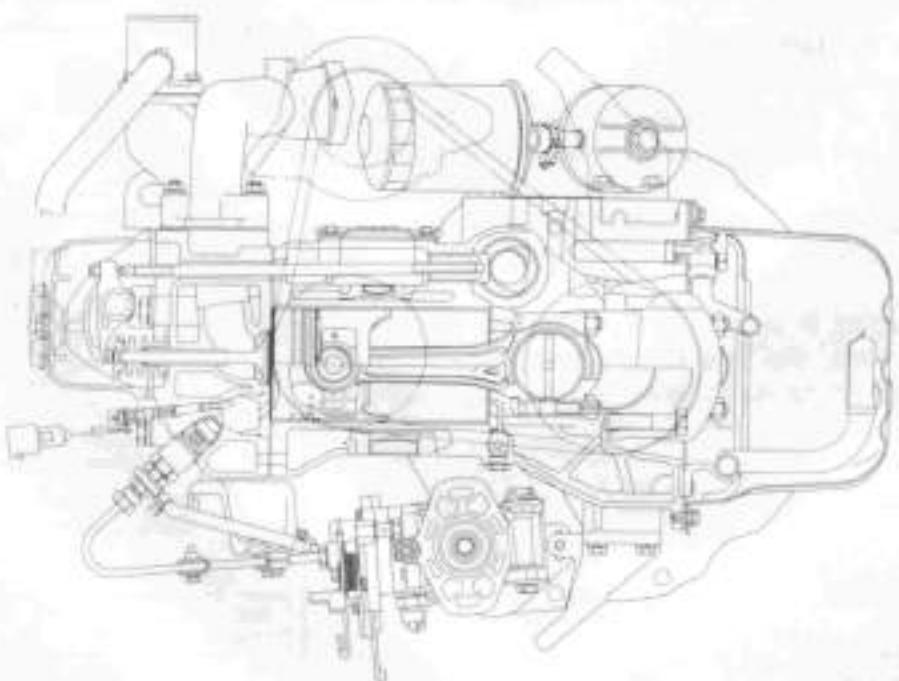

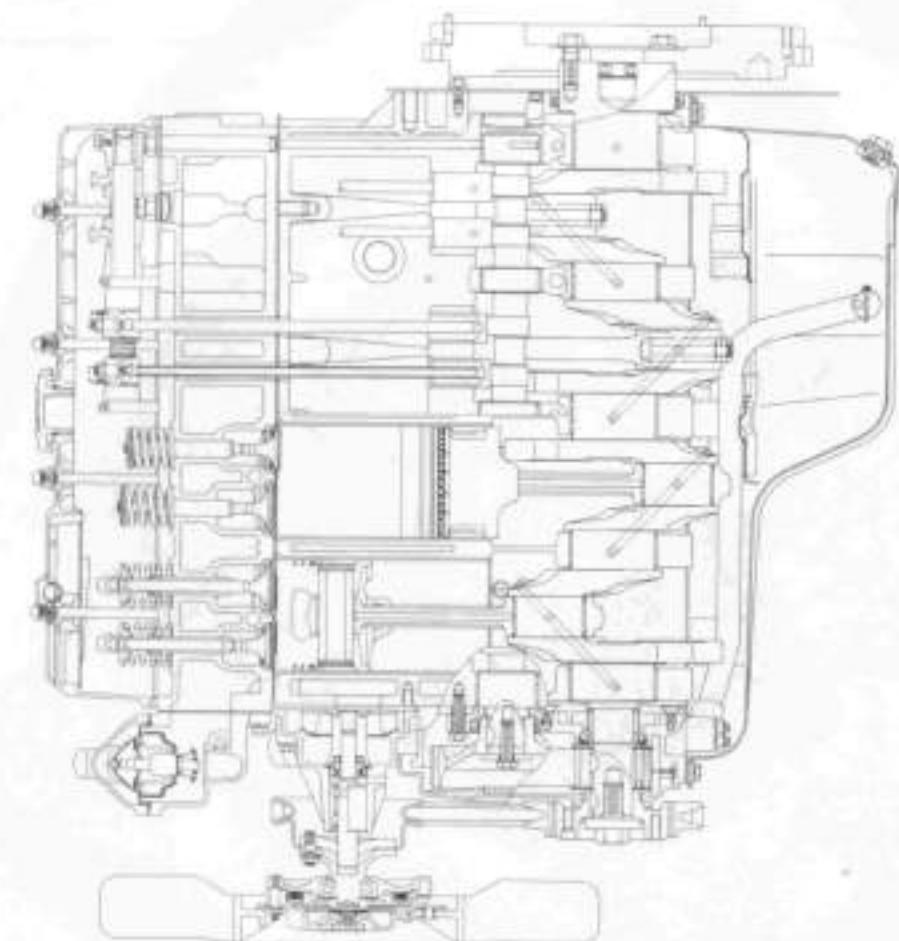

WRE91-G020

## **GENERAL INFORMATION**

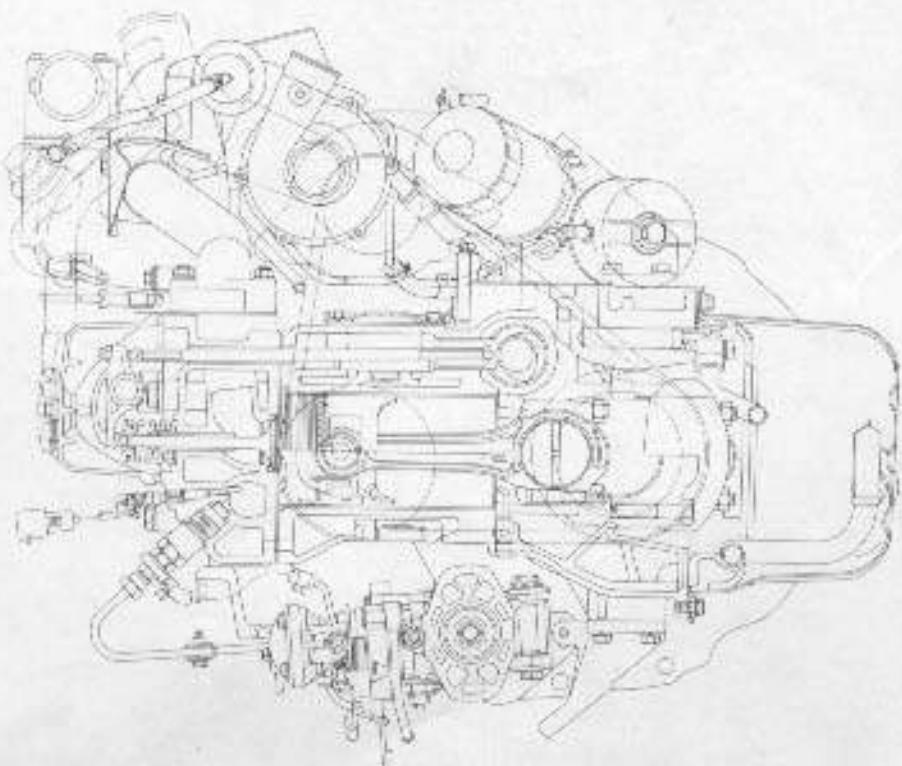

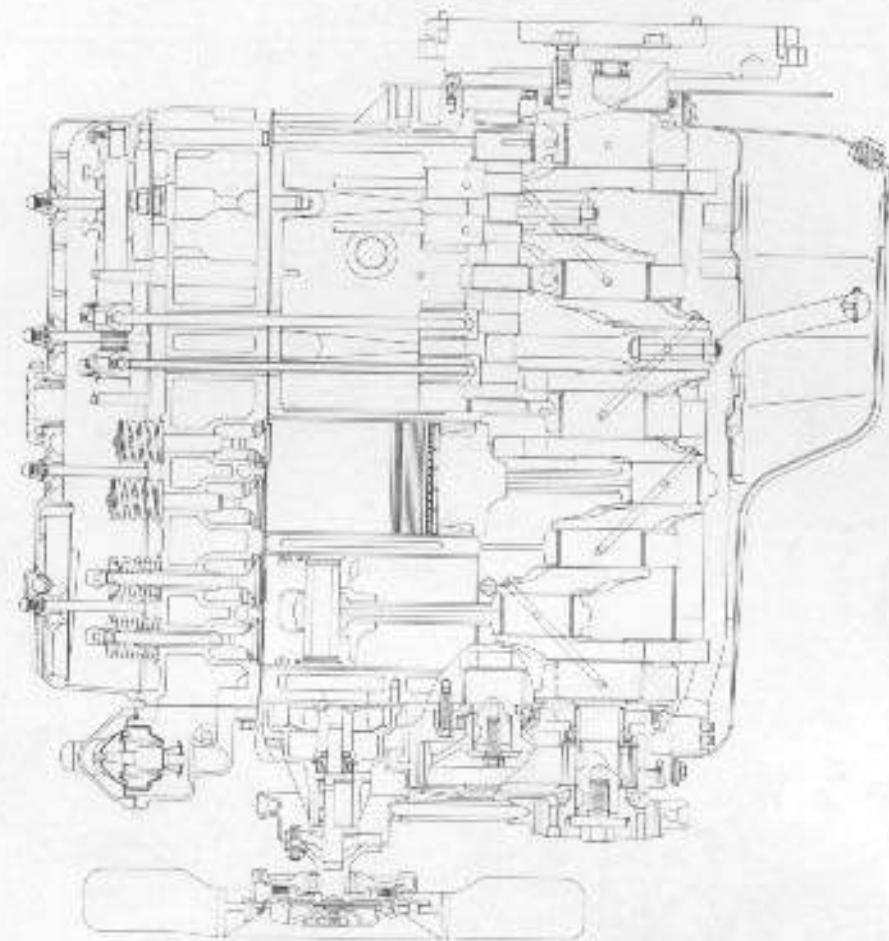

---

### **9-2. ENGINE SECTIONAL VIEWS**

Type DL-42 engine

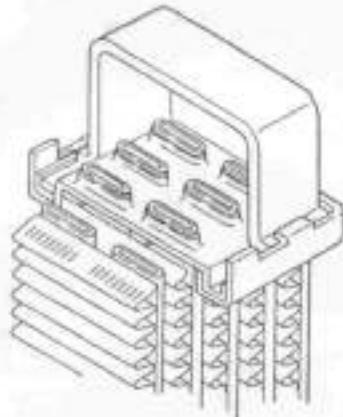

Type DL-52 engine

## GENERAL INFORMATION

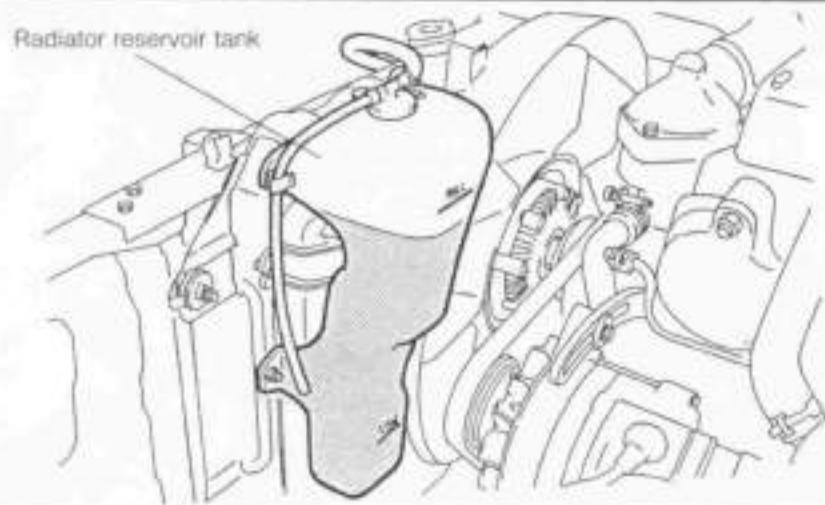

### 9-3. COOLING SYSTEM

In accordance with the employment of the water-cooled turbocharger, the radiator construction has been changed.

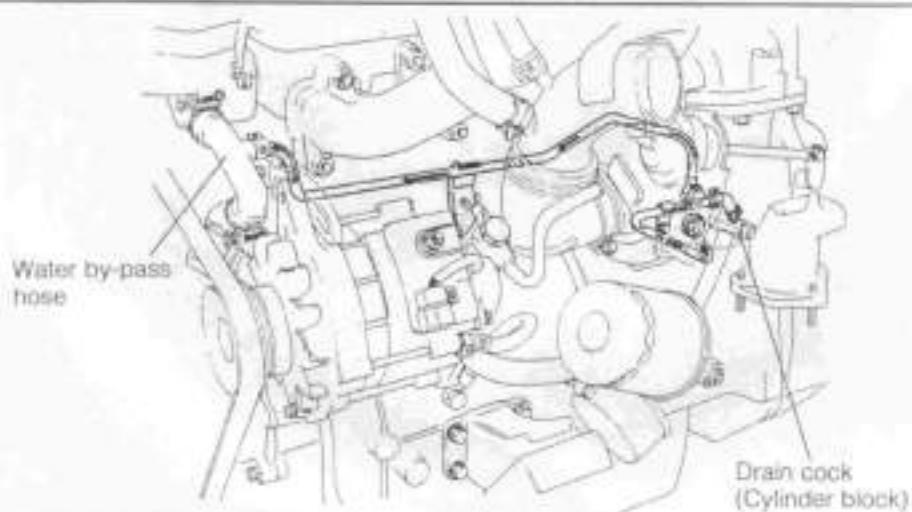

WIE91-G027

The radiator reservoir tank has been modified in its shape. Furthermore, the reservoir tank is now attached to the radiator. (DL-52 Only)

WIE91-G028

Modification has been made so that the bearing of the turbocharger is now cooled by the engine cooling water.

WIE91-G039

## 10. SUMMARY OF BODY AND OTHER CONSTRUCTIONS

### 10-1. BASIC DESIGN

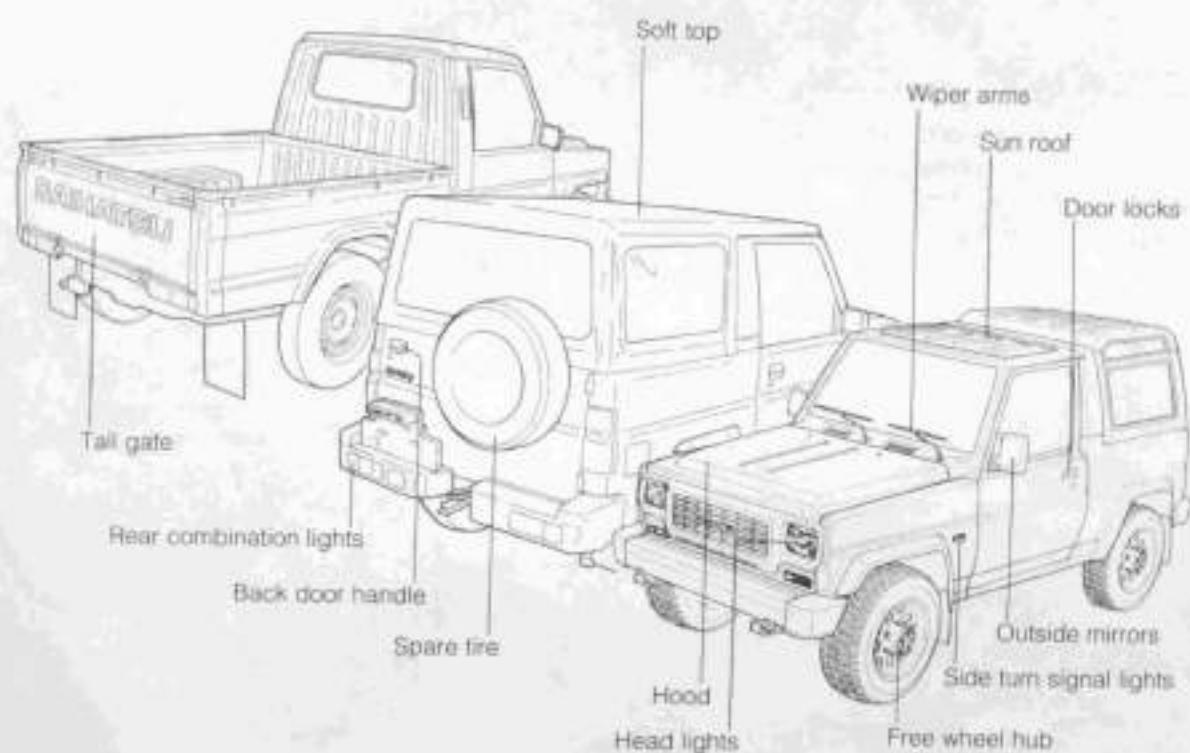

SOFT TOP  
(Short & Long)

PICKUP

Exterior view

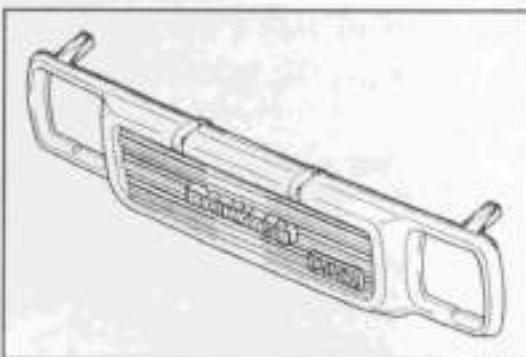

## GENERAL INFORMATION

### 10-2. EXTERIOR MODIFICATION

#### (1) Front grille

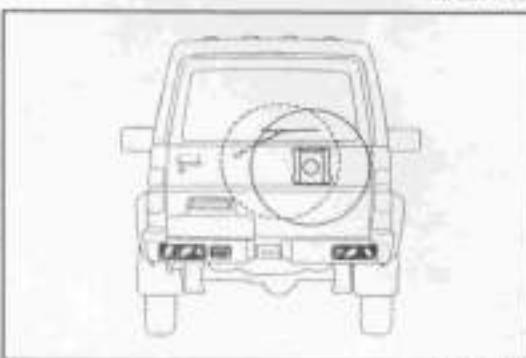

A new front grille design with a wider top-to-bottom width has been adapted to give the Rocky a "tough" look.

WRE91-G0031

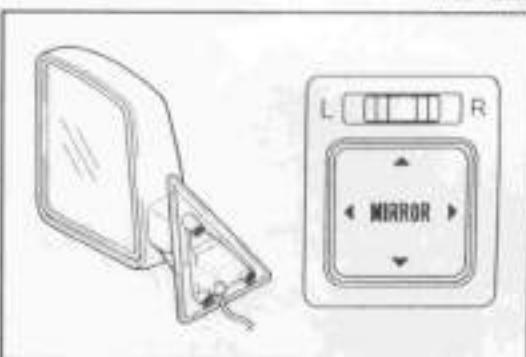

#### (2) The spare tyre position has been shifted 190 mm to the right and 30 mm lower to improve the rear view.

#### (3) The new rear combination lamps built into the rear bumper enhance visibility and can be seen even when the backdoor is fully open. This modification is for the European and Australian markets, and pickup model excepted.

WRE91-G0032

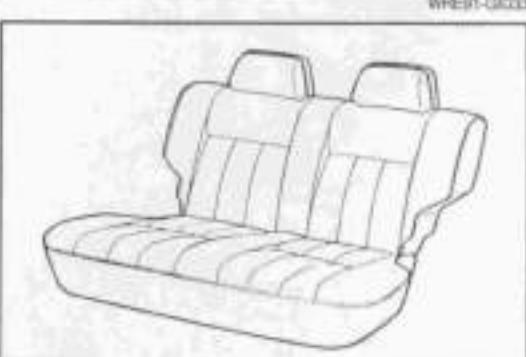

#### (4) Electrically operated outer mirror is available for optional equipment. (except AUS). A switch located on the dashboard below the instrument cluster.

WRE91-G0033

### 10-3. INTERIOR MODIFICATION

#### (1) 3-point ELR rear seat belts are available for the Wagon model (F75L(R)V) for optional. When the seat belts are installed, the seat back with armrests will be replaced with a large seat back without armrests.

WRE91-G0034

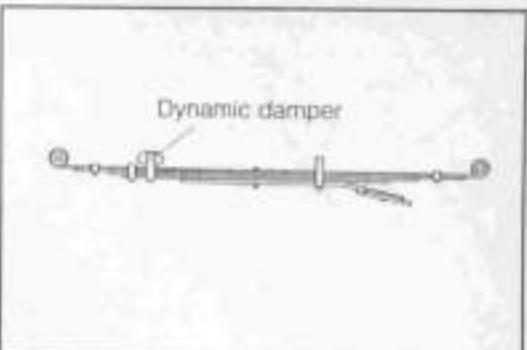

#### (2) 3-point ELR rear seat belts are also available for the Soft top model (F70L(R)) as a set option with a rear roll bar.

WRE91-G0035

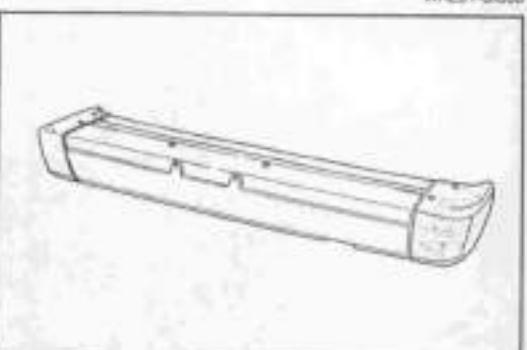

#### 10-4. OTHER MAJOR CHANGES

- (1) The mass dampers for the rear springs have been replaced with new dynamic dampers for reduced noise.

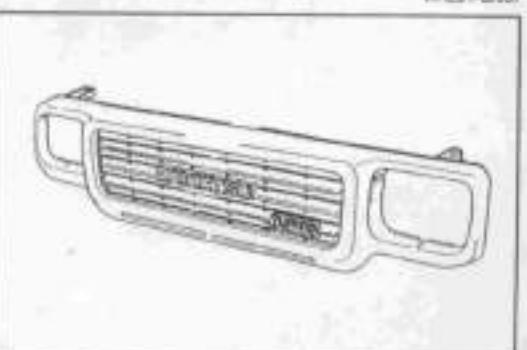

WRE91-G1036

- (2) The large front bumper formerly standard in the European markets except on the pickup models is now standard on all models.

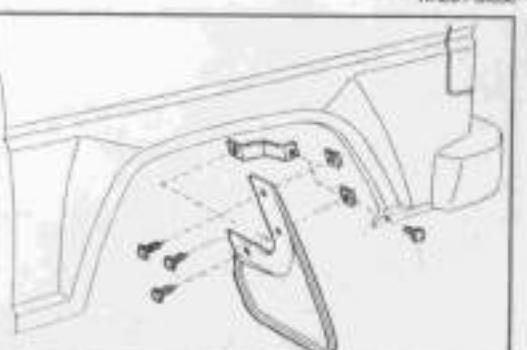

WRE91-G1037

- (3) In keeping with the change to the intercooler turbocharger, the front grille has been modified to include an INTER-COOLER TURBO mark.

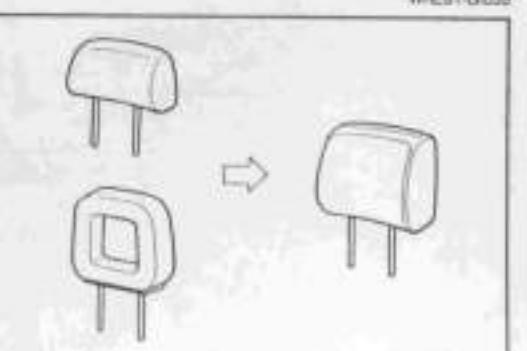

WRE91-G1038

- (4) The rear mudguards have been moved to the rear wheel arches. (Except for pickup model).

WRE91-G1039

- (5) The skeleton-type head restraints have been replaced by the fabric-covered, full form type.

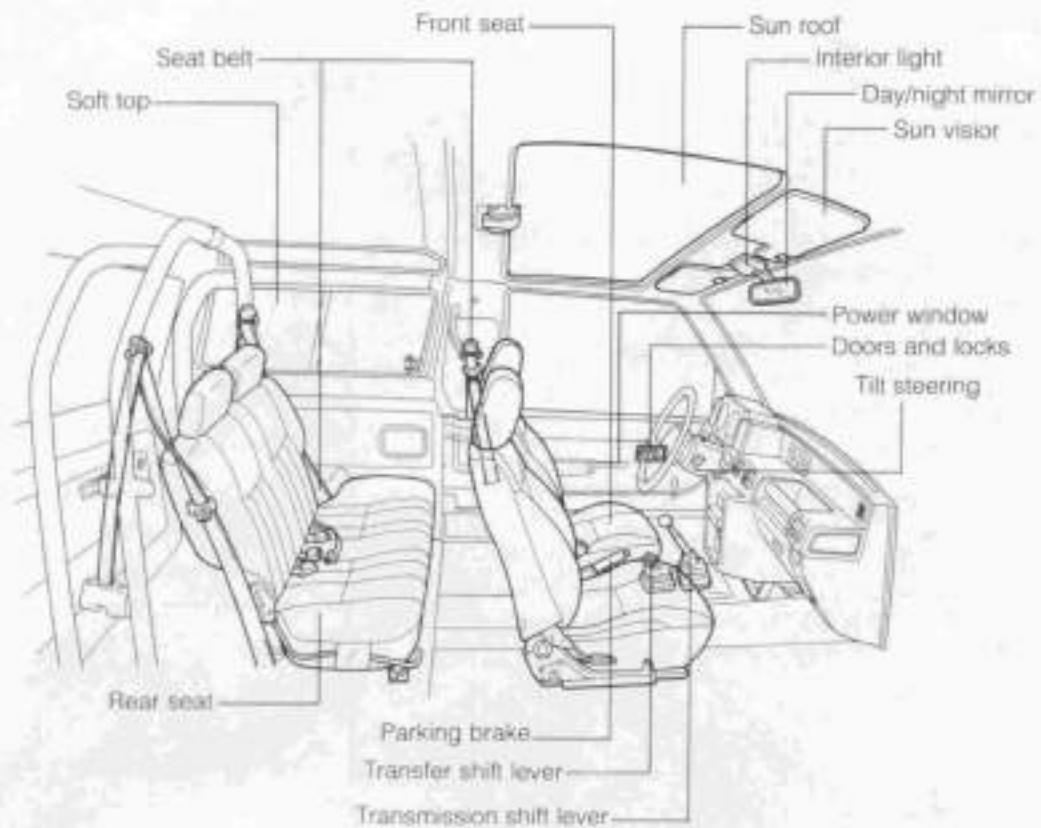

WRE91-G1040

## 10-7. BODY MOUNTS

The mounts where vehicle body and frame are coupled is fitted in such a manner as effectively reduce the vibration from the suspension and drive system.

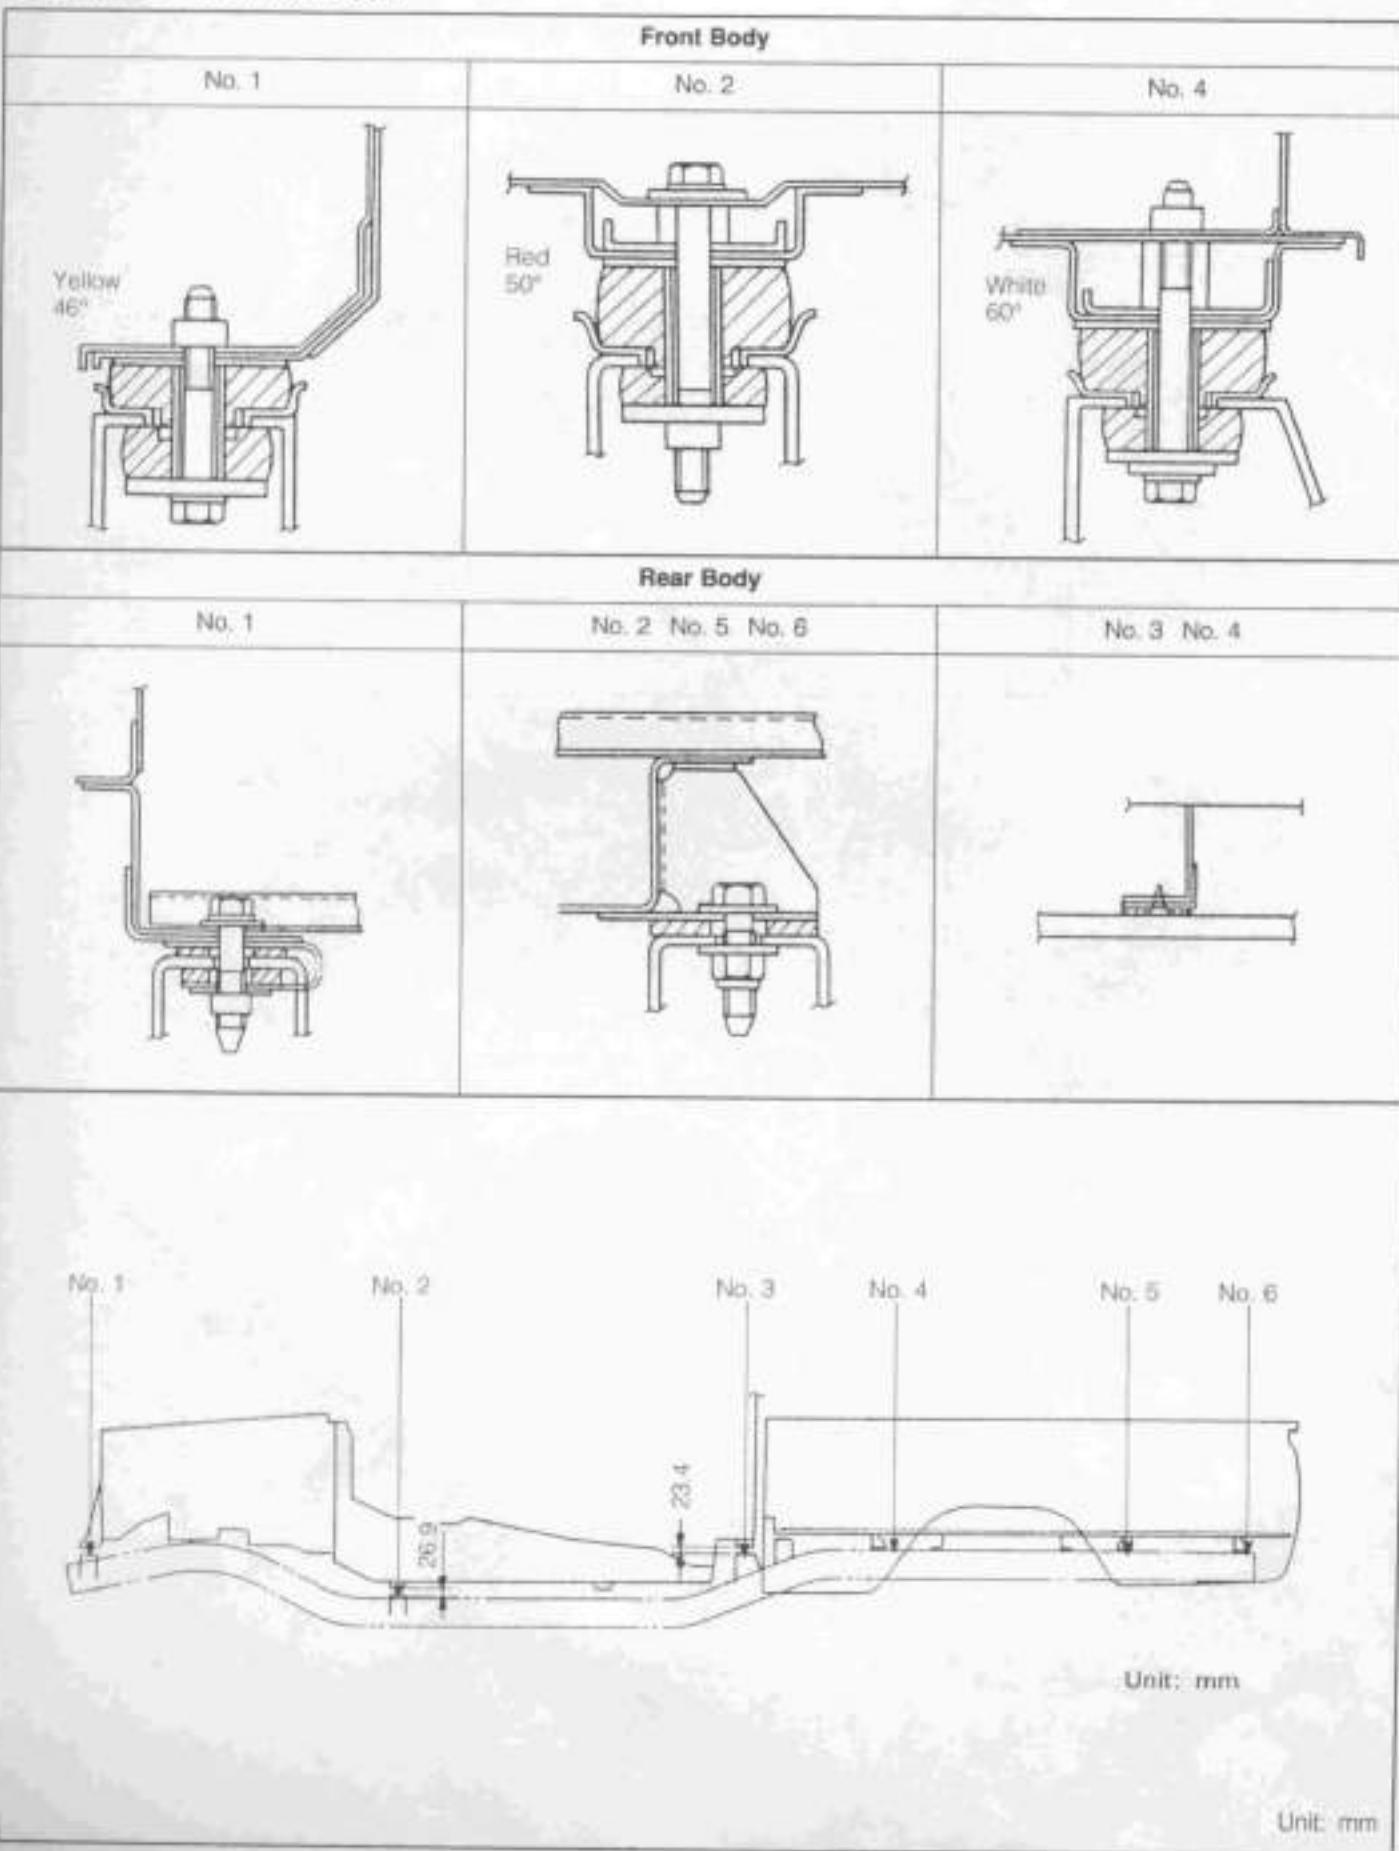

No.	1	2	*3	4	5
Hardness	46°	60°	42°	46°	60°
Color code	Yellow	White	Two lines	Yellow	White
Configuration			 (Except for hard top)		

\*Hard top (F70V and F80V) are free mount.

## GENERAL INFORMATION

(Continued — Pickup model)

WRE311-G348

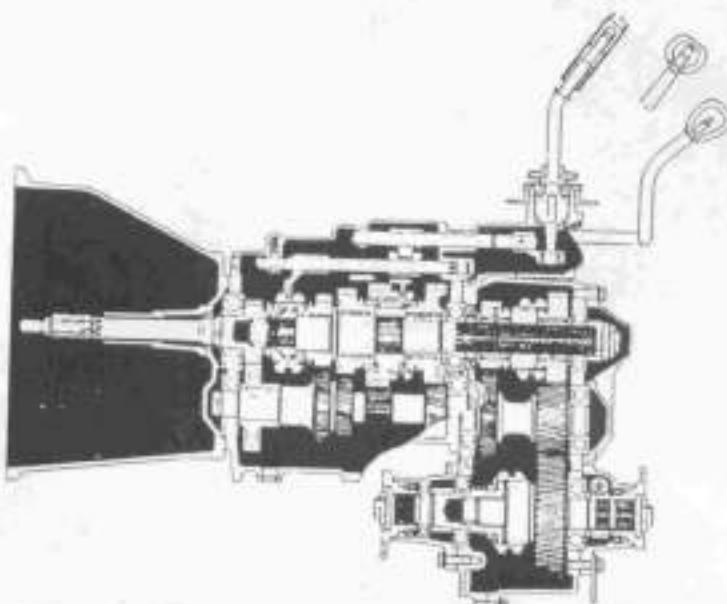

## 11. SUMMARY OF POWER TRAIN CONSTRUCTION

### 11-1. TRANSMISSION & TRANSFER

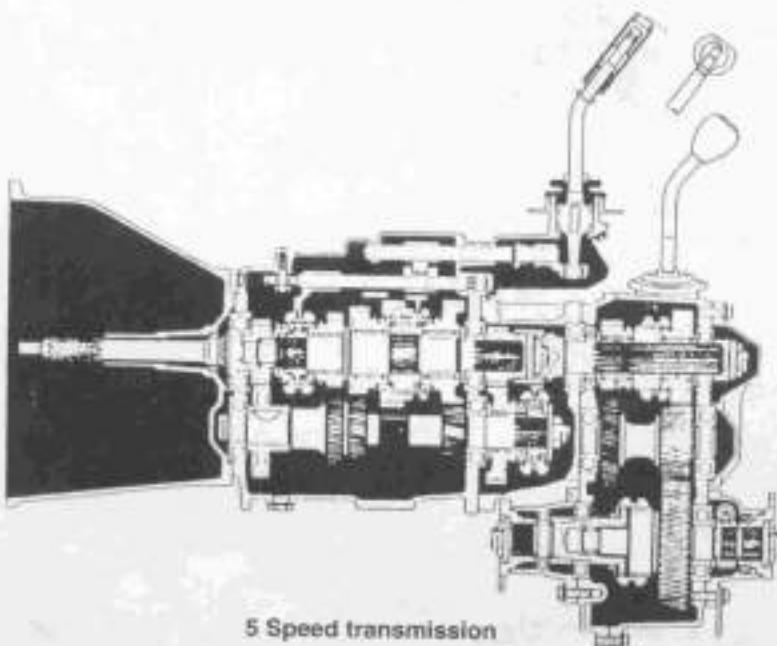

There are two transmission types, 4 speed and 5 speed.

The shift lever incorporating vibration-proof system provides smoother and more quiet shifting. The 5 speeds transmission is equipped with a mis-shift preventive mechanism to prevent direct shifting from the 5th to Reverse.

On the transfer, there are two speeds gear ratio, high and low with mechanical shifting or power shifting (optional equipment).

4 Speed transmission

5 Speed transmission

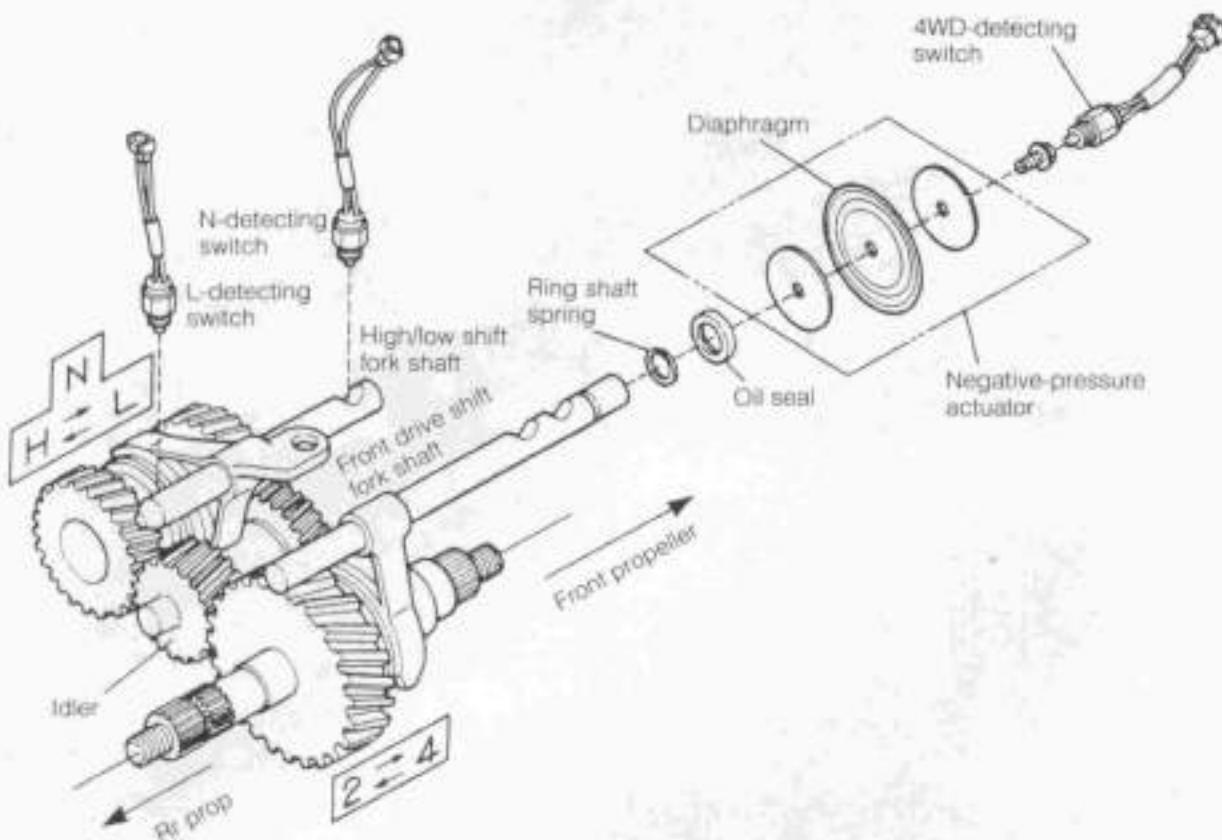

## GENERAL INFORMATION

### 11-2. POWER SHIFT MECHANISM

The shift from the two-wheel drive to the four-wheel drive and vice versa can be performed by means of power shift switch which utilizes a negative pressure actuator.

The negative pressure which has been generated by the vacuum pump is transmitted to a diaphragm actuator provided inside the transfer case. Consequently, the thrust generated by the actuator is transmitted directly to the drive shift fork shaft. In this way, the shift from the two-wheel drive to the four-wheel drive and vice versa is performed.

This device is available as optional equipment with 5-speed transmission.

WREB1-G1020

#### (1) Power switch operation

2H: 2-wheel drive, high speed range.

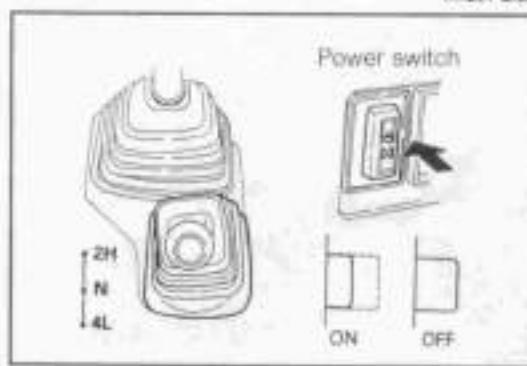

Shift the transfer shift lever into 2H position and turn OFF the power switch.

4H: 4-wheel drive, high speed range.

Shift the transfer shift lever into 2H position and turn ON the power switch.

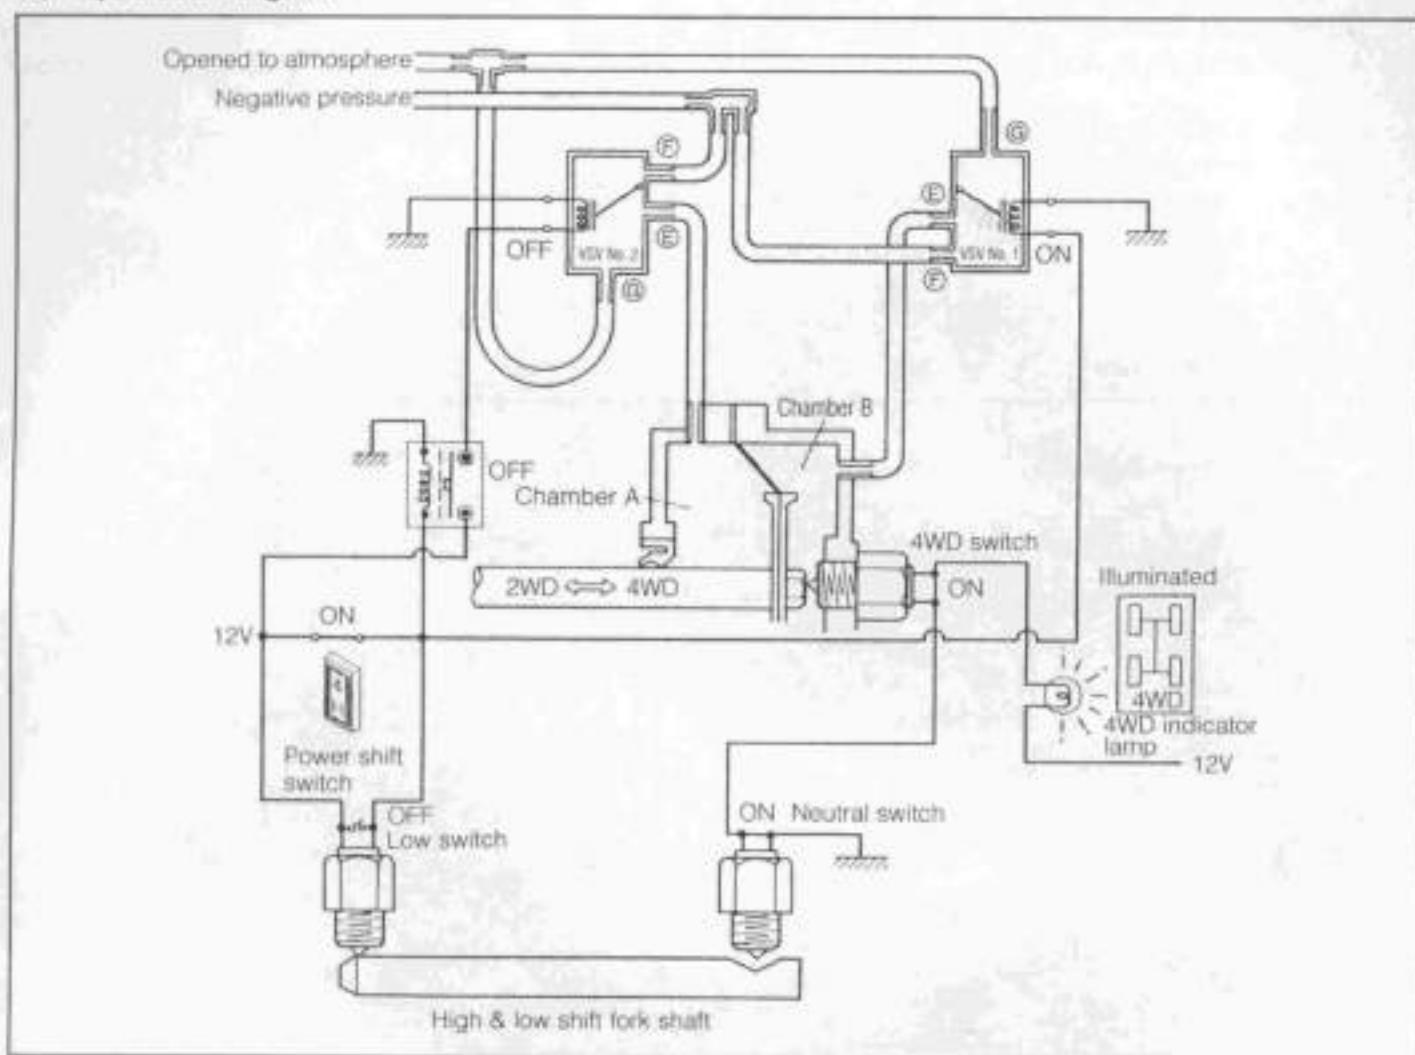

4L: 4-wheel drive, low speed range.

Shift the transfer shift lever into 4L position, even if the turn ON the power switch, do not operate to shift 4H.

OREB1-G1021

## (2) Operation diagram

WRE91-G052

## (3) Operating conditions of each switch

	2H		N		4L
Power switch	ON	OFF	ON	OFF	ON/OFF
VSV No. 1	ON	OFF	ON	OFF	ON
VSV No. 2	OFF	ON	OFF	ON	OFF
Low SW	OFF	OFF	OFF	OFF	ON
Neutral SW	ON	ON	OFF	OFF	ON
4WD SW	ON	OFF	ON	OFF	ON

WRE91-G053

## (4) Description

- High speed range (2H)
 

A negative pressure is applied to the chamber B of the actuator through the VSV No. 1. At this stage, the atmospheric pressure is applied to the chamber A of the actuator from the VSV No. 2. Consequently, because of the difference in pressure being applied to the diaphragm, the front drive shift fork which is connected directly to the diaphragm will be shifted to the four-wheel drive side.
- Low speed range (4L)
 

The negative pressure is transmitted in the same way as with cases where transfer shift lever is in the 2H position with the power switch turned ON. Since the low switch is turned ON, the VSV No. 2 is OFF regardless of the state of the power shift switch. As a result, the vehicle is driven on the four-wheel drive.

WRE91-G054

### 11-3. AUTOMATIC LOCKING HUB (ALH)

#### (1) Objective of setting

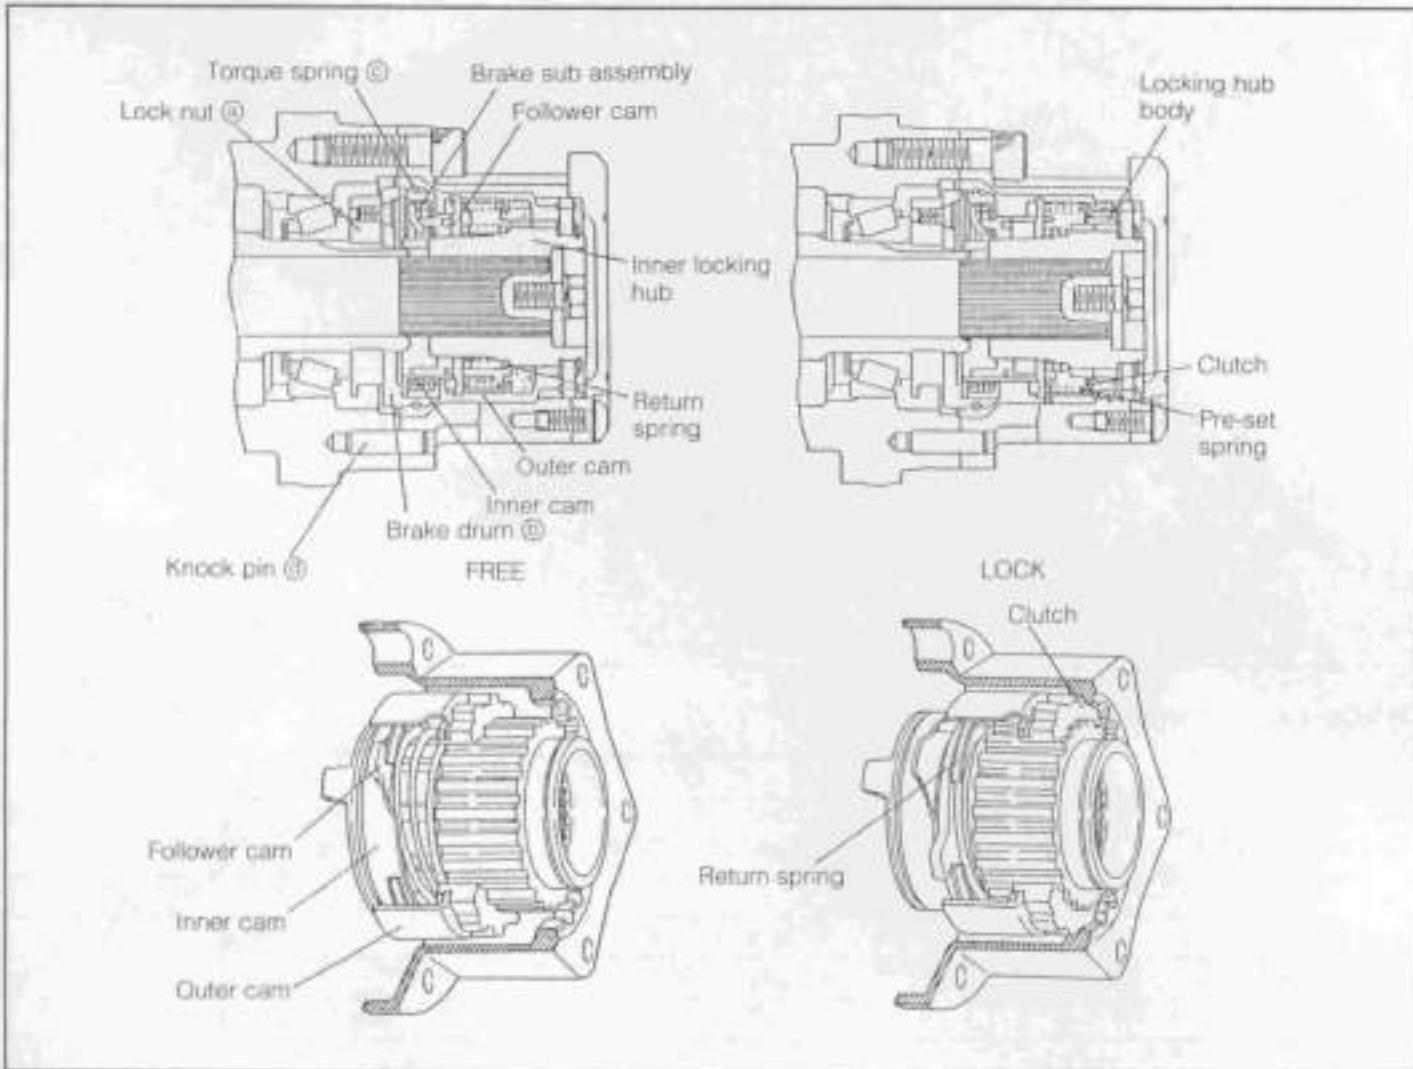

The ALH is set for improving the free  $\leftrightarrow$  lock switching operability from the conventional manual free wheel hub.

Namely, the ALH is capable of automatic switching by just starting the car while the free  $\leftrightarrow$  lock switching is to be done manually in the manual free wheel hub.

The ALH is mounted at the same position as the manual free wheel hub.

WRE91-G1055

#### (2) Outline of structure

#### Major differences with manual free wheel hub (Assembly parts)

- ( i ) A bearing lock nut @ is provided. (The existing bearing nut is not required.)
- ( ii ) A brake drum @ is provided to also replace the claw washer. (A claw washer is not required.)
- ( iii ) @ and @ are tightened and fixed by the torque spring ◎.
- ( iv ) A knock pin @ is set instead of the axle hub and ALH socket joint.

All of @- @ are ALH-dedicated parts.

- ( V ) Drive shaft is also required for automatic locking hub, when modification from manual to auto locking hub.

WRE91-G1056

**(3) Operation method****FREE → LOCK**

1. Stop the car and change the T/F to 4WD.
2. Start the car slowly holding the steering wheel in a straight forward travelling condition. (Note 1)
3. Run about 3 m or more, and the system will lock automatically.

**LOCK → FREE**

1. Stop the car and change the T/F to 2WD.
2. Back up the car slowly holding the steering wheel in a straight forward travelling condition. (Note 2)
3. Run about 3 m or more, and the system become free automatically.

**Notes**

1. It doesn't matter whether forward or backward.
2. Strictly speaking, start the car in the opposite direction to the direction of travelling just before changing the T/F to 2WD.

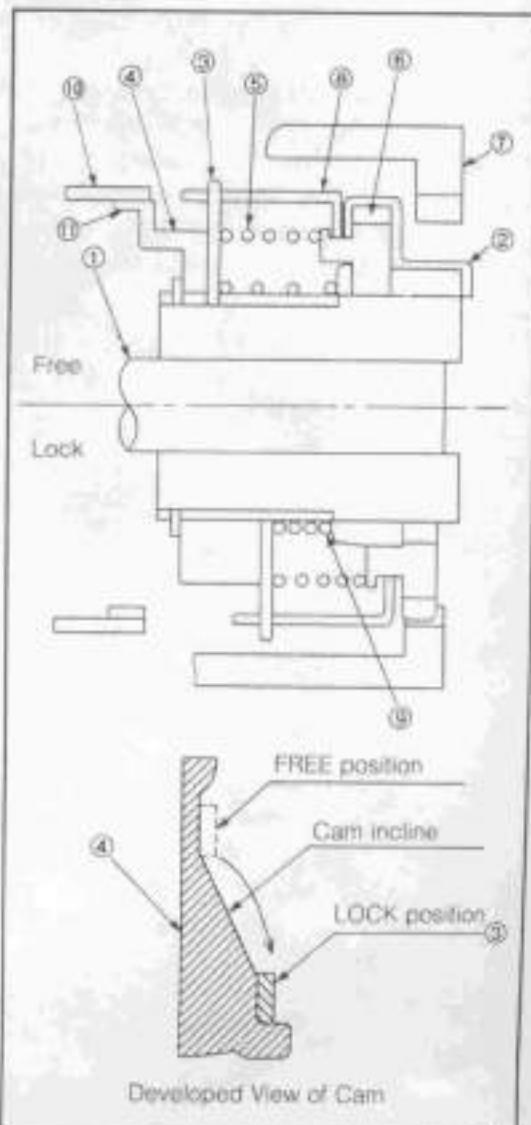

WREH-1008

**(4) Operating principle****FREE → LOCK**

1. When the car is started after changing the T/F to 4WD, the drive shaft ① turns to turn the inner ② and the cam follower ③ as one.
2. The brake drum ⑩, which is fixed to another part (bearing lock nut), does not turn. The brake sub-assembly ⑪ is suppressed from turning by the frictional force with ⑩. ④, which is engaged with the claw of ⑪, is also suppressed from turning. (Note 1)
3. As a result, ③ climbs the cam incline of ④ while turning to move to the right-hand side of the diagram.  
(See the developed view of the cam.)
4. As ③ moves to the right-hand side, the clutch ⑥ attached to the preset spring ⑤ also moves to engage the hub body's ⑦ inner teeth to lock.

**Note 1.**

- When locked, ⑪ starts turning to slide along the frictional face of ⑩.

WREH-1008

## GENERAL INFORMATION

### LOCK → FREE

- When the car is backed up after changing the T/F to 2WD, the system is driven backward from the wheel side to turn ⑦, ⑥ and the hub joint ⑧, ③ backward as one.  
(② and ① also turn as one until unlocked.)
- ③, which is pressed onto the cam incline of ④ by the return spring ⑨, goes down the cam incline of ④ to move to the left-hand side of the diagram.
- As ③ moves to the left-hand side, ⑥ is pulled to the left-hand side by ⑧ to free the system.

WRE91-G069

### Cautions on user handling

In the event of ratcheting, stop the car once, change the T/F to 4WD, and then start the car.

#### 1. Avoidance of Ratcheting

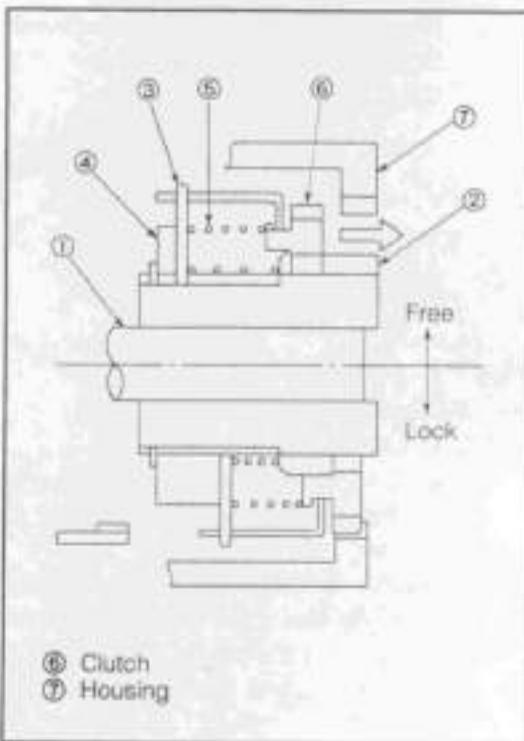

The gear noise that occurs when the clutch and the housing are about to lock while there is a difference between the speeds of the two.

#### 2. Prevention of T/F Operation during Travelling Ratcheting

occurs if the T/F is shifted 2WD → 4WD by mistake while travelling with the T/F at 2WD and the ALH free.  
In that case, take the disposition of 1.

#### 3. Observance of Straight Forward Starting at ALH Change

when changing the ALH free ↔ lock, hold the steering wheel in a straight forward travelling condition and run about 3 m or more. (If the steering wheel is turned before running a minimum of 3 m, one of the ALH's on both sides locks while the other becomes free to cause ratcheting.)

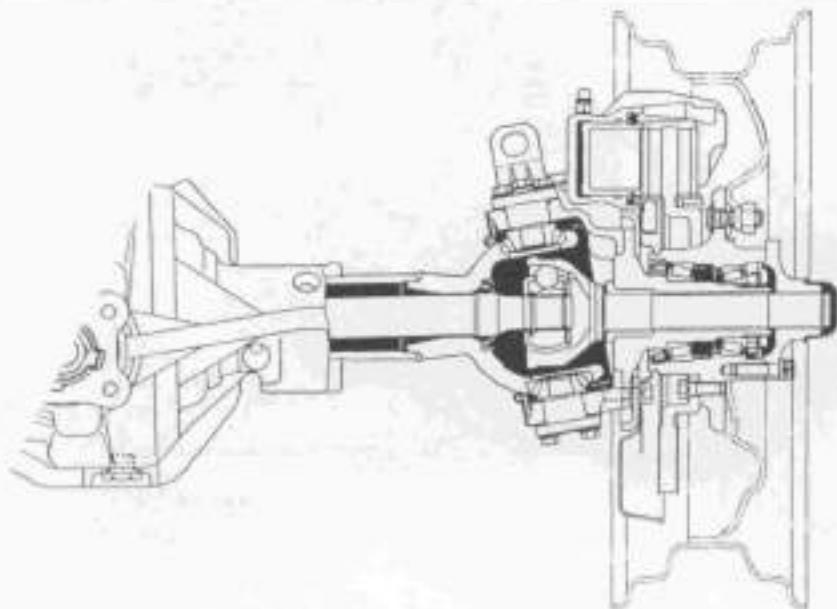

WRE91-G060

## 12. SUMMARY OF CHASSIS CONSTRUCTION

### 12-1. FRONT AXLE

The front axle is of the full floating shaft tube type. It consists of Birfield type constant velocity ball joints, which make possible simultaneous front wheel driving and steering simultaneously and the steering knuckles, which also serve as the ball joint cases.

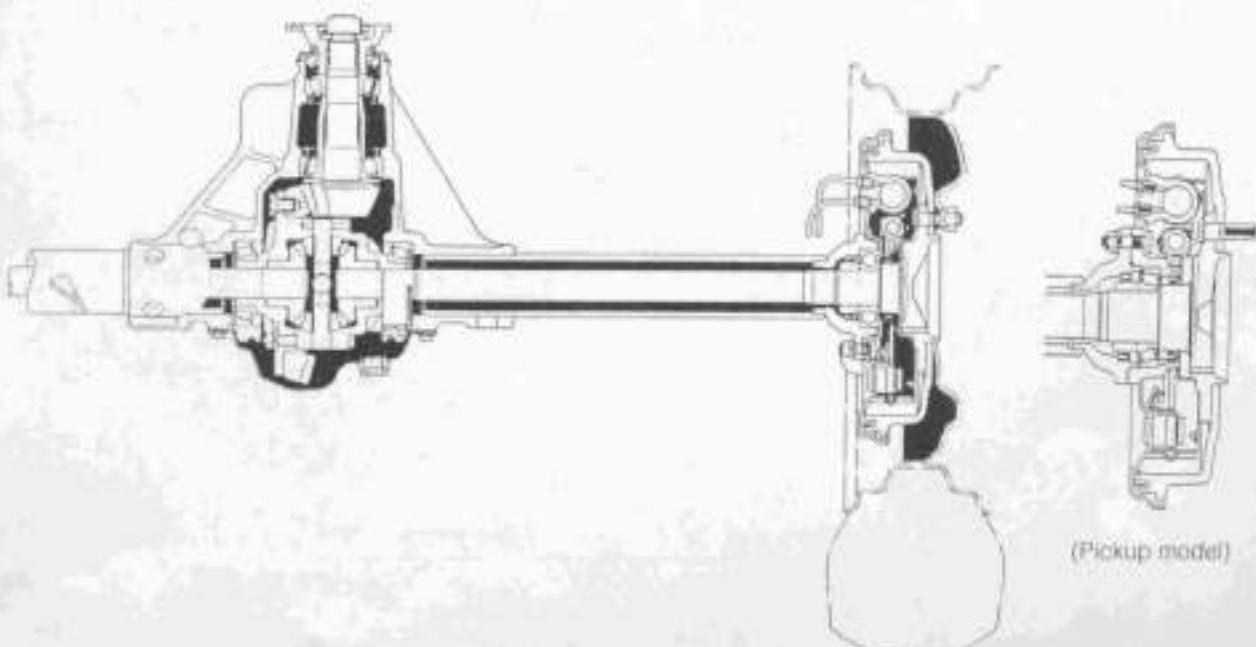

The steering knuckle is connected to the front axle housing through the tapered roller bearings at the upper and lower steering knuckle bearing caps.

WREB1-G1061

### 12-2. REAR AXLE

The rear axle is of the semi-floating type with a built-up type housing. The differential has been mounted off-center toward the right side in relation to the longitudinal center of the vehicle.

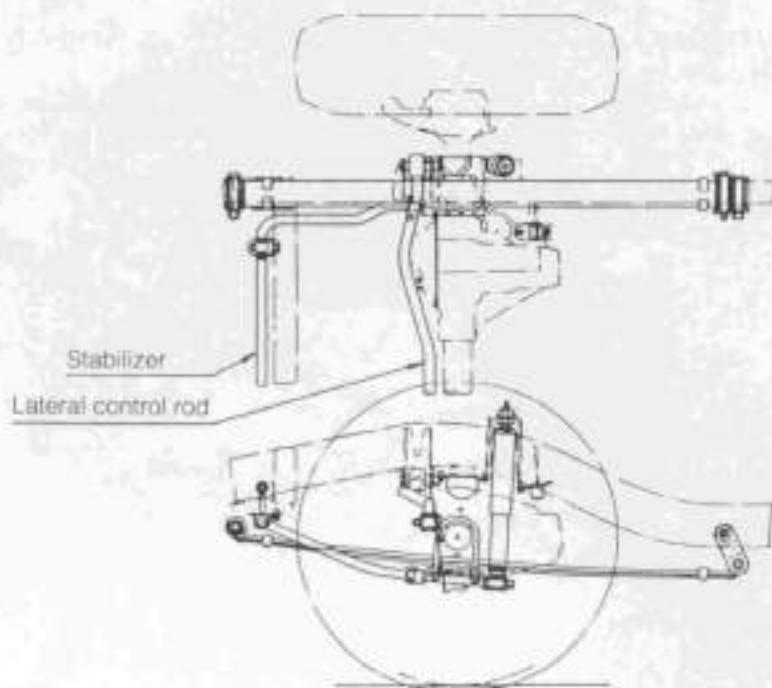

(Pickup model)

WREB1-G1062

## GENERAL INFORMATION

### 12-3. FRONT SUSPENSION

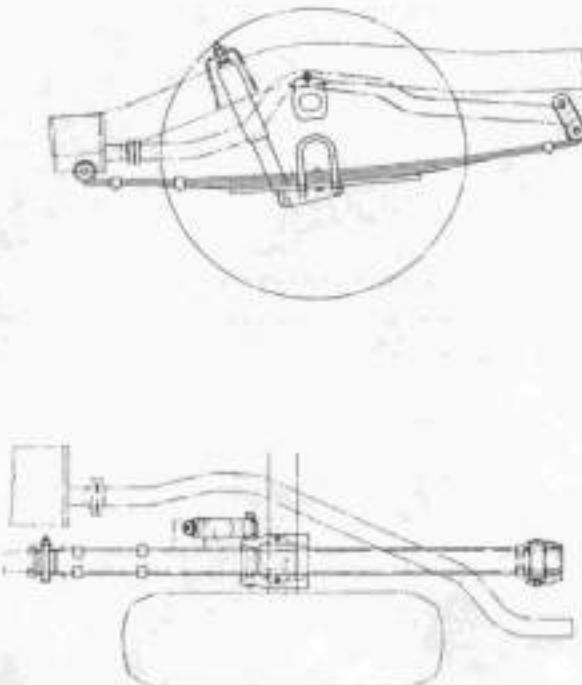

For greater riding comfort and operational safety, the front suspension features stabilizer, lateral control rods, gas-loaded shock absorbers and rear shackles.

WRE91-G/063

### 12-4. REAR SUSPENSION

The rear suspension features large-size gas-loaded shock absorbers and spring dumpers, both fabricated of rubber for greater riding comfort.

WRE91-G/064

## 12-5. THREE-STAGE DAMPERS

The three-stage dampers allows switching the damping force of the shock absorbers in three steps depending on the road and traveling conditions. It is used in the F70 and F75 as optional equipment. The dampers are operated from the switch in the center console box.

### (1) SOFT

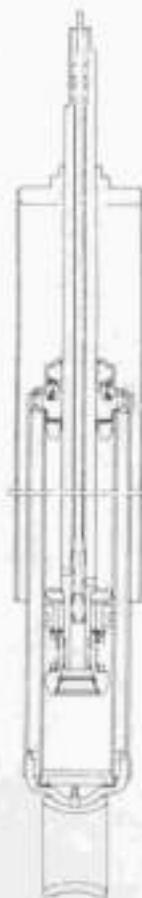

Both of the two holes provided in the control rod and the shaft align with each other. This increases the amount of gas which is passed, decreasing the damping force.

### (2) NORMAL

Only one of the two hole align, increasing the damping force to the medium level.

### (3) HARD

Both of the holes are out of alignment, maximizing the damping force. The damping force is generated by these holes and the piston valve section.

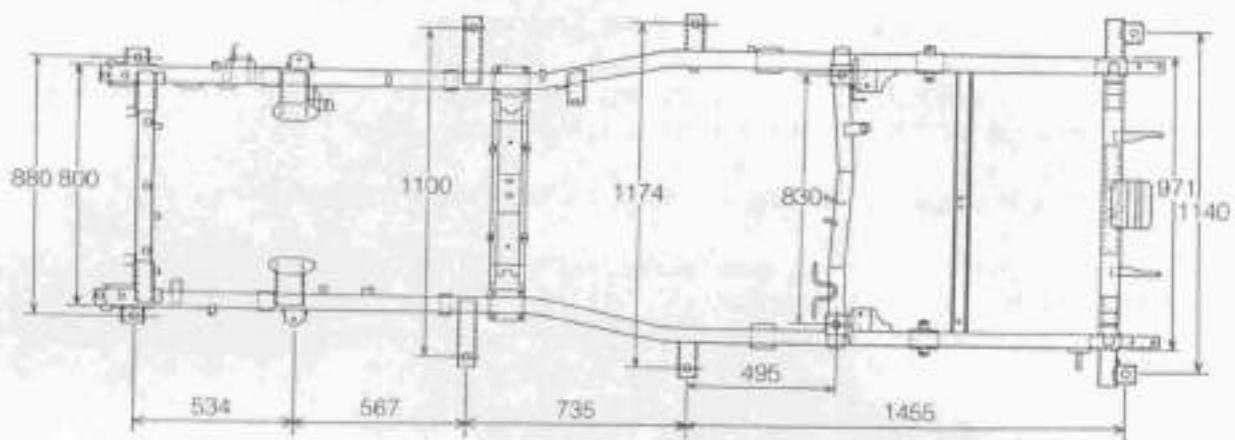

Selection Mode	Condition of gas holes		
	Shaft	Expand	Contact
SOFT			
NORMAL			
HARD

## 12-7. BRAKE

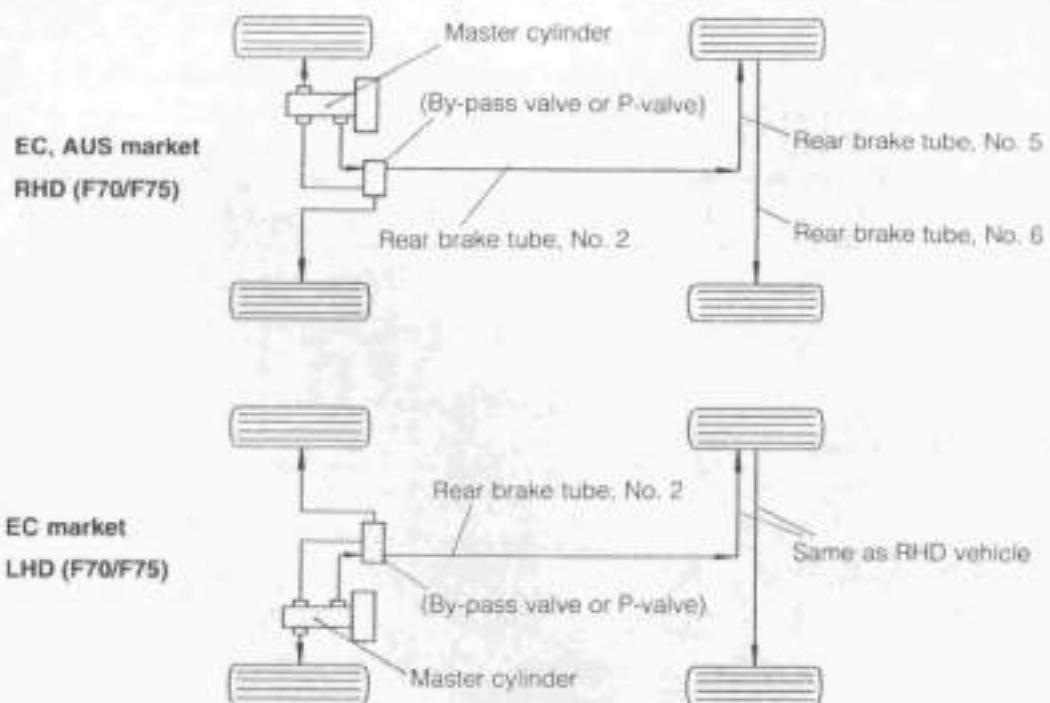

### (1) Brake line

The brake line comes in two kinds; one for the R.H.D. vehicles and the other for the L.H.D. vehicles. On all models, the disc brake is provided at the front wheels, while the drum brake is installed at the rear wheels.

The rear brake systems are operated through a proportioning valve on General market, a by-pass valve on AUS and EC market, and a load sensing proportioning valve for F77 model.

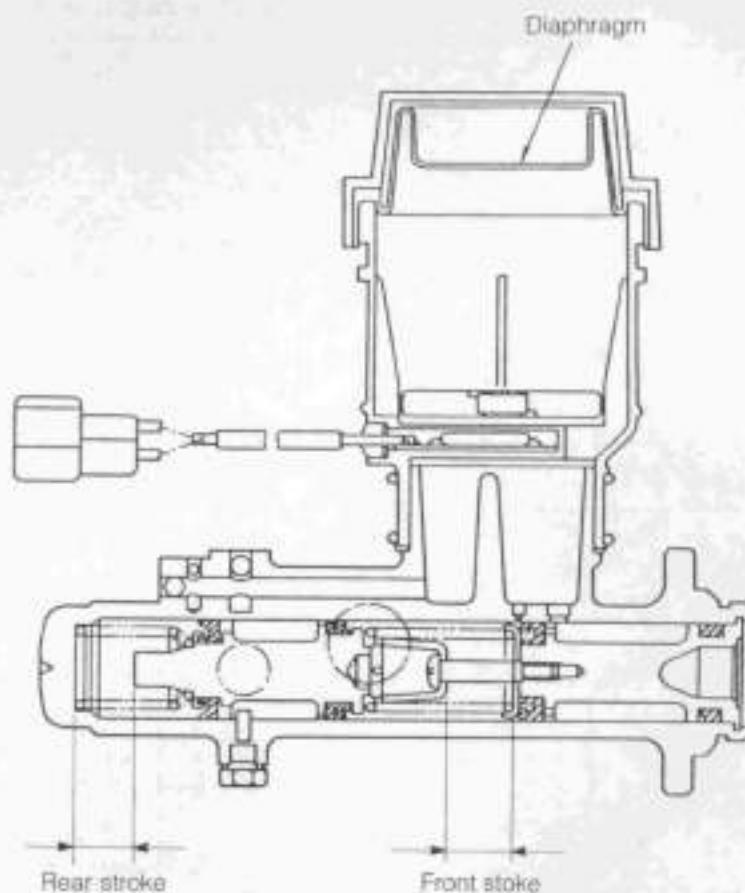

## GENERAL INFORMATION

## (2) Master cylinder and reservoir

The master cylinder is an aluminum casting. The reservoir is a sealed type which shuts off the brake fluid from the atmosphere with the diaphragm, thus preventing the fluid from deteriorating and maintaining high braking capacity for long periods of time.

## Master cylinder specifications

Cylinder bore	mm	22.22	
Stroke	mm	Front	18.5
		Rear	11.5
Reserve tank capacity	cc	Front	16
		Rear	12
			(Common use as front and rear)

## GENERAL INFORMATION

### 13. SUMMARY OF BODY ELECTRICAL

#### 13-1. FUSE BLOCK & FUSIBLE LINK

The fuse block is located at the cowl side of the driver's side. Blade type fuses have been employed. A fuse is provided independently for each of the right and left headlamps in order that the load for each circuit may be reduced.

A sub-fuse block is installed below the instrument panel at the driver's seat side.

#### (2) Warning & Indicator lamps

Kind	Indication	Function
Warning lamp	Hazard warning	<b>HAZARD</b> Flashes when hazard switch is turned ON. Indicating color: Red
	Brake warning	<b>BRAKE</b> Glow when brake fluid becomes too low or empty, or when parking brake is applied. Indicating color: Red
	Parking brake warning	<b>PARK BRAKE</b> Glow when parking brake is applied while the engine is running. Indicating color: Red
	Oil pressure warning	<b>OIL</b> Glow when engine oil pressure system is encountered with abnormality while engine is running. Indicating color: Red
	Charge warning	<b>CHARGE</b> Glow when engine charging system is encountered with abnormality while engine is running. Indicating color: Red
	Seat belt warning	<b>TASCHEN BELTS</b> Glow for about six seconds when driver fails to buckle up seat belt at driver's seat after ignition switch has been turned ON or engine has started. Indicating color: Red
	Fuel drain warning	<b>FUEL DRAIN</b> Glow when the water in fuel is accumulated in the fuel filter in excess of the stipulated amount. Indicating color: Red
Indicator lamp	High beam indicator	<b>HI</b> Glow when upper beams of headlamps are turned ON. Indicating color: Amber
	Turn signal indicator	<b>↔</b> Flashes when turn signal switch or hazard warning switch is turned ON. Indicating color: Green
	4WD indicator	<b>4WD</b> Glow when the transfer shift lever is moved to the 4H or 4L position with the engine switch turned ON. Indicating color: Green
	Glow plug indicator	<b>100° GLOW</b> Glow when ignition key holds at the G position or ON position. Indicating color: Red
